### PREFACE

The Census of U.S. Civil Aircraft contains an annual count of all registered civil aircraft in the United States. This information is disseminated by the Federal Aviation Administration to serve as an up-to-date reference on the U.S. civil aircraft fleet, its size and composition. Historical series are presented to enable industry and other aviation groups to evaluate aviation progress, determine past trends, and estimate future trends. This publication contains data for calendar year 1975.

The data comprising this report were compiled from official aircraft registration and airman certification records maintained by the Data Services Division, FAA Aeronautical Center and from official airport records maintained by the System Planning Division, Airports Service.

The Census of U.S. Civil Aircraft is prepared by the Information Operations Branch, Information and Statistics Division, Office of Management Systems by Betty V. Cayce. Suggestions and comments on the scope and content of this report are requested and will be given careful consideration in planning future editions.

Distribution: ZMS-348C. FAS-1, FAT-0, FFS-1, 2, 3, 5, 7, 8, FIA-0 (1 copy only)

### I. METHODOLOGY

U.S. registered aircraft include aircraft of the U.S. air carriers and those in general aviation. This report will present tables on both groups separately, and combined when necessary.

Understanding the methodology of the collection of this data in use since 1970 is important to the user; therefore, a resume of this process will be presented here. Of special importance is the method used to estimate flight hours for the general aviation fleet.

Source of data. In January of each year, owners of all aircraft registered as of December 31 of the prior year receive an Aircraft Registration Eligibility, Identification, and Activity Report, AC Form 8050–73 (see Appendix). In Part 1, mandatory under Federal Air Regulation (FAR) 47.44, the owner is required to verify or cancel the registration of the aircraft. If the owner does not submit the form, the aircraft registration is revoked, and it is then illegal to fly that aircraft. The aircraft is excluded from the official count of the following year. In Part 2 of the form, general aviation aircraft owners are requested to supply various information, including the number of flight hours in each of several use categories for the prior year.

Part 1 is used to verify the aircraft registration for the year in which the frem is mailed. Part 2 is used to collect activity data for the year prior to which the form a mailed.

Classification a pircraft fleet. Aircraft are classified into two major categories based on the number of flight hours either reported or estimated.

- Active All legally registered civil aircraft for which one or more flight hours are reported.
- 2. Inactive All legally registered civil aircraft for which zero flight hours are reported.

Flight hours for nonrespondents. Flight hours are estimated and assigned to nonrespondents if there is no reported activity data for an aircraft. The situation occurs when the owner does not complete Part 2 of the registration verification form, or when the owner has not returned the form before the activity statistics are compiled.

- 1. Each aircraft, reported or not reported, is assigned a random number.
- 2. All aircraft are then grouped by manufacturer, model, and series.

- Aircraft within the groups are sequenced by the random number assigned in Step 1.
- 4. Aircraft in each group having no activity data are assigned the number of hours in the same use categories as the aircraft preceding it in the sequence.
- 5. The aircraft for which activity data were assigned are identified as "imputes".

In this way, an aircraft may be classified as active with a positive number of flight hours assigned to it or as inactive with zero hours assigned.

The methodology implies that the nonresponding owners use their aircraft in exactly the same pattern as owners who do respond; that is, the aircraft are flown approximately the same number of hours and in the same use categories.

Geographical location of aircraft. The region, state, and county of an aircraft is dependent upon the location of the airport at which the aircraft is based. However, if an owner completes Part 2 of the registration form by entering "None" or "Not based at an Airport", the aircraft is assigned to the state and county of the owner's address.

If the base airport is unknown because the owner did not respond to Part 2 or did not return the form before the activity statistics are compiled, a base airport is assigned to the aircraft.

- 1. All aircraft are sequenced according to the region, state, county and zip code of the owner's address.
- 2. Aircraft that have an unknown base airport are assigned to the same base airport as the aircraft preceding it in the sequence. Please note that this procedure allows a base airport of "None" to be assigned.

This method implies that aircraft owners base their aircraft at the same airport used by their neighbors. The procedure is designed so that the aircraft may not be assigned to an airport outside the owner's region; and so that the base airport of an owner in one state may not be used to assign base airport for an owner living in another state.

Base airport for aircarrier aircraft has no meaning. Therefore, these aircraft are excluded from all geographical tables.

### II. U.S. REGISTERED CIVIL AIRCRAFT

### IV. GENERAL AVIATION AIRCRAFT

Estimate of general aviation aircraft for 1975 shows a total of 193.7 thousand as compared to 185.3 thousand in 1974; of the 193.7 thousand, 168.5 thousand were counted as active aircraft (see Methodology). Estimated hours flown in 1975 totaled 34.2 million and 32.5 in 1974.

Total estimated data for general aviation consists of reported data obtained from AC Form 8050–73, and estimates by FAA for nonrespondents. It must be emphasized that these measures of general aviation activity are estimated. The accuracy of these estimates are dependent upon (1) the quality and quantity of the activity data reported by aircraft owners, and (2) the validity of the assumption regarding the usage patterns of the non-respondent owners.

## U.S. REGISTERED CIVIL AIRCRAFT BY MANUFACTURER AND MODEL, NUMBER OF SEATS, AND POWER PLANT

December 31, 1975

### LEGEND

### **Tables 23-28**

The codes used in machine processing to indicate the six basic types of aircraft have been retained in this report. Codes and interpretations are shown below.

### Basic aircraft type (first position):

| Glider                   | <br> |  |  |  |  |  |  |  |  |  |  |  | 1 |
|--------------------------|------|--|--|--|--|--|--|--|--|--|--|--|---|
| Balloon                  |      |  |  |  |  |  |  |  |  |  |  |  |   |
| Dirigible                | <br> |  |  |  |  |  |  |  |  |  |  |  | 3 |
| Single-engine fixed-wing |      |  |  |  |  |  |  |  |  |  |  |  | 4 |
| Multiengine fixed-wing.  |      |  |  |  |  |  |  |  |  |  |  |  |   |
| Rotorcraft               |      |  |  |  |  |  |  |  |  |  |  |  |   |

### Type powerplant

| Piston                | <br> |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 |
|-----------------------|------|--|--|--|--|--|--|--|--|--|--|--|--|--|---|
| Turboprop             | <br> |  |  |  |  |  |  |  |  |  |  |  |  |  | 2 |
| Turboshaft            |      |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| Turbojet              | <br> |  |  |  |  |  |  |  |  |  |  |  |  |  | 4 |
| Turbine air-generator |      |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| Ramiet                |      |  |  |  |  |  |  |  |  |  |  |  |  |  |   |

Examples: 51 – fixed-wing multiengine, piston-powered airplane

54 - fixed-wing multiengine, turbojet airplane

52 - fixed-wing multiengine, turboprop airplane

The three items reported in the "Powerplant" column are: (1) the make of the engine, (2) the number of engines, and (3) the power range.

TABLE 23
US REGESTERED CIVIL AIRCRAFT
BY MANUFACTURER AND PODEL-NUMBER OF SEATS AND FOWER PLANT
SUMMARY

AS OF DECEMBER 31, 1975

٤
